The Great Music City-Andrea Baker 2019-03-01
In the 1960s, as gentrification took hold of New York City, Jane Jacobs predicted that the city would become the true player in the global system. Indeed, in the 21st century more meaningful comparisons can be made between cities than between nations and states. Based on case studies of Melbourne, Austin and Berlin, this book is the first in-depth study to combine academic and industry analysis of the music cities phenomenon. Using four distinctly defined algorithms as benchmarks, it interrogates Richard Florida's creative cities thesis and applies a much-needed synergy of urban sociology and musicology to the concept, mediated by a journalism lens. Building on seminal work by Robert Park, Lewis Mumford and Jane Jacobs, it argues that journalists are the cultural branders and street theorists whose ethnographic approach offers critical insights into the urban sociability of music activity.

Language Planning from Practice to Theory-Robert B. Kaplan 1997-01-01 Language Planning

from Practice to Theory examines and reviews the field of language policy and planning. In the first section of the book language policy and planning definitions, current practices, goals and ways of thinking are discussed as a foundation for understanding current practice in the discipline. The central elements of language policy and planning practice are then described from two perspectives. In the second section, the methodology for collecting language planning data is outlined and the key cross-societal issues of language-in-education planning, literacy and economics in language planning are discussed. In the third section, case studies related to language and power, bilingualism and status and specific purpose issues in language planning are covered. The final two chapters draw together the critical issues and problems which have arisen from current practice and which must be considered in building a theory of the discipline. A reference appendix to language planning in national situations is included. The book provides the only up-to-date overview and review of the field of language policy and planning and challenges language planners to think more critically about their discipline. Since language will be planned, there is a need to consider how it will be done.

Deadly Paradise-Ejiro Joyce Otiye-Igbuzor 2000

Ethical Issues in Aviation-Elizabeth Hoppe 2016-05-13 Applied ethics has been gaining wide attention in a variety of curriculums, and there is growing awareness of the need for ethical training in general. Well-publicized ethical problems such as the Challenger disaster, the Ford Pinto case and the collapse of corporations such as Enron have highlighted the need to

rethink the role of ethics in the workplace. The concept of applied ethics originated in medicine with a groundbreaking book published in 1979. Business ethics books began to appear in the 1980s, with engineering ethics following in the 1990s. This volume now opens up a new area of applied ethics, comprehensively addressing the ethical issues confronting the civil aviation industry. Aviation is unique in two major ways: firstly it has a long history of government regulations, and secondly its primary focus is the safety of its passengers and crew. For decades commercial aviation was viewed in the same manner as public utilities, and thus it was highly regulated by the government. Since the Deregulation Act of 1978, aviation has been viewed as any other business while other experts continue to believe that the sudden switch to deregulation has caused problems, especially since many airlines were unprepared for the change. Ethical Issues in Aviation focuses on current concerns and trends, to reflect the changes that have occurred in this deregulated era. The book provides the reader with an overview of the major themes in civil aviation ethics. It begins with theoretical frameworks, followed by sections on the business side of aviation, employee responsibility, diversity in aviation, ground issues regarding airports, air traffic control and security, as well as health and the environment. The contributors to the volume include both academics doing research in the field as well as professionals who provide accounts of the ethical situations that arise in the workplace.

Spacecraft Dynamics and Control-Anton H. de Ruiters 2012-12-05 Provides the basics of spacecraft orbital dynamics plus attitude dynamics and control, using vectrix notation
Spacecraft Dynamics and Control: An Introduction presents the fundamentals of classical control in the context of spacecraft attitude control. This approach is particularly beneficial for the training of students in both of the subjects of classical control as well as its application to spacecraft attitude control. By using a physical system (a spacecraft) that the reader can visualize (rather than arbitrary transfer functions), it is easier to grasp the motivation for why topics in control theory are important, as well as the theory behind them. The entire treatment of both orbital and attitude dynamics makes use of vectrix notation, which is a tool that allows the user to write down any

vector equation of motion without consideration of a reference frame. This is particularly suited to the treatment of multiple reference frames. Vectrix notation also makes a very clear distinction between a physical vector and its coordinate representation in a reference frame. This is very important in spacecraft dynamics and control problems, where often multiple coordinate representations are used (in different reference frames) for the same physical vector. Provides an accessible, practical aid for teaching and self-study with a layout enabling a fundamental understanding of the subject. Fills a gap in the existing literature by providing an analytical toolbox offering the reader a lasting, rigorous methodology for approaching vector mechanics, a key element vital to new graduates and practicing engineers alike. Delivers an outstanding resource for aerospace engineering students, and all those involved in the technical aspects of design and engineering in the space sector. Contains numerous illustrations to accompany the written text. Problems are included to apply and extend the material in each chapter. Essential reading for graduate level aerospace engineering students, aerospace professionals, researchers and engineers.

Brain Changer-Felice Jacka 2019-02-26 'This is a fascinating book, by a leading researcher, covering one of the most exciting areas of modern nutritional research - how what we eat impacts our gut and brain. The combination of personal stories and cutting edge science is a real winner.' Michael Mosley You feel how you eat. We accept that the quality of our diet affects the health of our heart and liver. So why wouldn't diet - good or bad - affect the health of our brain? This is the question that Australian scientist Felice Jacka set out to answer. Having suffered depression and anxiety as a young woman, she wanted to understand the role diet plays in our overall mental and brain health. What she found through her own research and that of other eminent scientists worldwide will revolutionise

the way we think about what we eat and how we care for our brains. * Obesity and depression are two major causes of disease and disability across the globe, and each influences the other. *Food does affect mood: highly processed foods increase depression risk, while a balanced, whole-food diet can prevent depression and improve mood. *A healthy diet improves gut health, and in turn health microbiota (gut bacteria) promote brain health and keep our weight in check. *A healthy diet improves brain performance at all ages, from school-age kids to their work-stressed parents. *The Mediterranean diet is linked to lower rates of Alzheimer's disease and general cognitive decline in older people. Professor Jacka, who leads the field of Nutritional Psychiatry research globally, provides not just the most recent scientific evidence but also a range of simple, practical solutions for improving the way we eat on a daily basis, including meal plans and a range of delicious recipes. This is not a diet book. This is a guide to the good habits that will protect your most precious organ, improve your quality of life and optimise mental and brain health across your lifespan. PRAISE FOR BRAIN CHANGER 'Jacka is leading the way in providing evidence-based approaches that are rooted in cutting-edge science to transform how we think about mental health.' Professor John Cryan

Storm World-Chris Mooney 2008-08-04 An investigation into climate change and increasingly dangerous hurricanes from the New York Times—bestselling author of *The Republican War on Science*. A leading science journalist delves into a red-hot debate in meteorology: whether the increasing ferocity of hurricanes is connected to global warming. In the wake of Katrina, Chris Mooney follows the careers of leading scientists on either side of the argument through the 2006 hurricane season, tracing how the media, special interests, politics, and the weather itself have skewed and amplified what was already a fraught scientific debate. As Mooney puts it: “Scientists, like hurricanes, do extraordinary things at high wind speeds.”

Mooney—a New Orleans native, host of the Point of Inquiry podcast, and author of *The Republican Brain*—has written “a well-researched, nuanced book” that closely examines whether we as a society should be held responsible for making hurricanes even bigger monsters than they already are (*The New York Times*). “Mooney serves his readers as both an empiricist who gathers data and an analyst who puts it into context. The result is an important book, whose author succeeds admirably in both his roles.” —*The Plain Dealer* “Engaging and readable . . . Mooney catches real science in the act and, in so doing, weaves a story as intriguing as it is important.” —*Los Angeles Times Book Review* “Mooney has hit upon an important and controversial topic, and attacks it with vigor.” —*The Boston Globe* “An absorbing, informed account of the politics behind a pressing contemporary controversy.” —*Kirkus Reviews*

Among the Himalayas-Laurence Austine Waddell 1899

The Purchase Price-Emerson Hough 2020-09-28 This time the shaft went home. The florid countenance of young Captain Carlisle flushed yet ruddier beneath its tan. His lips set still more tightly under the scant reddish mustache. With a gesture of impatience he lifted his military hat and passed a hand over the auburn hair which flamed above his white forehead. His slim figure stiffened even as his face became more stern. Clad in the full regimentals of his rank, he made a not unmanly figure as he stood there, though hardly taller than this splendid woman whom he addressed—a woman somewhat reserved, mocking, enigmatic; but, as he had said, charming. That last word of description had been easy for any man who had seen her, with her long-lashed dark eyes, her clear cheek just touched with color, her heavy dark hair impossible to conceal even under its engulfing bonnet, her wholly exquisite and

adequate figure equally unbanished even by the trying costume of the day. She stood erect, easy, young, strong, fit to live; and that nature had given her confidence in herself was evidenced now in the carriage of head and body as she walked to and fro, pausing to turn now and then, impatient, uneasy, like some caged creature, as lithe, as beautiful, as dangerous and as puzzling in the matter of future conduct. Even as he removed his cap, Carlisle turned to her, a man's admiration in his eyes, a gentleman's trouble also there. "My dear Countess St. Auban," said he, more formally, "I wish that you might never use that word with me again,—jailer! I am only doing my duty as a soldier. The army has offered to it all sorts of unpleasant tasks. They selected me as agent for your disappearance because I am an army officer. I had no option, I must obey. In my profession there is not enough fighting, and too much civilian work, police work, constable work, detective work. There are fools often for officers, and over them politicians who are worse fools, sometimes. Well, then, why blame a simple fellow like me for doing what is given him to do? I have not liked the duty, no matter how much I have enjoyed the experience. Now, with puzzles ended and difficulties beginning, you threaten to make my unhappy lot still harder!"

Mustaine-Dave Mustaine 2010-08-03 New York Times Bestseller Founding member, singer, and lead guitarist of Metallica and Megadeth shares the ultimate, unvarnished story behind his involvement in the rise of two of the world's most influential heavy metal bands in history. Dave Mustaine is the first to admit that he's bottomed out a few times in his dark and twisted speed metal version of a Dickensian life. From his soul-crushing professional and artistic setbacks to his battle with addiction, Mustaine has hit rock bottom on multiple occasions. April 1983 was his lowest point, when he was unceremoniously fired from Metallica for his hard-partying ways. But, what seemed to be the end of it all was just the beginning for the guitarist. After parting ways with Metallica, Mustaine went on to become the front man, singer, songwriter, guitarist (and de facto CEO) for Megadeth—one of the most successful metal bands in the world. A pioneer of the thrash metal movement, Megadeth rose to international fame in the 1980s, and has gone on to earn seven consecutive Grammy nominations for Best Metal Performance. In this outrageously candid memoir, one of heavy metal's most iconic figures gives an insider's look into the loud and sordid world of thrash metal—sex, drugs, and rock n' roll included.
