**Yossarian Slept Here**-Erica Heller 2011-08-23  
THROUGHOUT ERICA HELLER'S LIFE, when people learned that Joseph Heller was her father, they often remarked, "How terrific!" But was there a catch? Like his most famous work, her father was a study in contradictions: eccentric, brilliant, and voracious, but also mercurial, competitive, and stubborn, with a love of mischief that sometimes cut too close to the

bone. Being raised by such a larger than- life personality could be claustrophobic, even at the sprawling Upper West Side apartments of the Apthorp, which the Hellers called home—in one way or another—for forty-five years. *Yossarian Slept Here* is Erica Heller's wickedly funny but also poignant and incisive memoir about growing up in a family—her iconic father; her wry, beautiful mother, Shirley; her younger brother, Ted; her relentlessly inventive grandmother Dottie—that could be by turns caring, infuriating, and exasperating, though anything but dull. From the forbidden pleasures of ordering shrimp cocktail when it was beyond the family's budget to spending a summer, as her father's fame grew, at the Beverly Hills Hotel, Erica details the Hellers' charmed—and charmingly turbulent—trajectory. She offers a rare glimpse of meetings with the Gourmet Club, where her father would dine weekly with Mel Brooks, Zero Mostel, and Mario Puzo, among others (and from which all wives and children were strictly verboten). She introduces us to many extraordinary residents of the Apthorp, some famous—George Balanchine, Sidney Poitier, and Lena Horne, to name a few—and some not famous, but all quite memorable. Yet she also manages to limn the complex bonds of loyalty and guilt, hurt and healing, that define every family. Erica was among those present at her father's bedside as he struggled to recover from Guillain-Barré syndrome and then cared for her mother when Shirley was diagnosed with terminal cancer after the thirty-eight-year marriage and intensely passionate partnership with Joe had ended. Witty and perceptive, and displaying the descriptive gifts of a born storyteller, this authentic and colorful portrait of life in the Heller household unfolds alongside the saga of the family's moves into four distinctive apartments within the Apthorp, each representing a different phase of their lives together—and apart. It is a story about achieving a dream; about fame and its aftermath; about lasting love, squandered opportunities, and how to have the best meal in Chinatown.

**Introduction to Mathematical Thinking**-Keith J. Devlin 2012 In the twenty-first century, everyone can benefit from being able to think mathematically. This is not the same as "doing math." The latter usually involves the application of formulas, procedures, and symbolic

manipulations; mathematical thinking is a powerful way of thinking about things in the world -- logically, analytically, quantitatively, and with precision. It is not a natural way of thinking, but it can be learned. Mathematicians, scientists, and engineers need to "do math," and it takes many years of college-level education to learn all that is required. Mathematical thinking is valuable to everyone, and can be mastered in about six weeks by anyone who has completed high school mathematics. Mathematical thinking does not have to be about mathematics at all, but parts of mathematics provide the ideal target domain to learn how to think that way, and that is the approach taken by this short but valuable book. The book is written primarily for first and second year students of science, technology, engineering, and mathematics (STEM) at colleges and universities, and for high school students intending to study a STEM subject at university. Many students encounter difficulty going from high school math to college-level mathematics. Even if they did well at math in school, most are knocked off course for a while by the shift in emphasis, from the K-12 focus on mastering procedures to the "mathematical thinking" characteristic of much university mathematics. Though the majority survive the transition, many do not. To help them make the shift, colleges and universities often have a "transition course." This book could serve as a textbook or a supplementary source for such a course. Because of the widespread applicability of mathematical thinking, however, the book has been kept short and written in an engaging style, to make it accessible to anyone who seeks to extend and improve their analytic thinking skills. Going beyond a basic grasp of analytic thinking that everyone can benefit from, the STEM student who truly masters mathematical thinking will find that college-level mathematics goes from being confusing, frustrating, and at times seemingly impossible, to making sense and being hard but doable. Dr. Keith Devlin is a professional mathematician at Stanford University and the author of 31 previous books and over 80 research papers. His books have earned him many awards, including the Pythagoras Prize, the Carl Sagan Award, and the Joint Policy Board for Mathematics Communications Award. He is known to millions of NPR listeners as "the Math Guy" on Weekend Edition with Scott Simon. He writes a popular monthly blog "Devlin's Angle" for the Mathematical Association of America, another blog under the name "profkeithdevlin", and also blogs on various topics for the

Huffington Post.
