Springer clinical medicine program). Each chapter is a case that opens with a unique clinical presentation, followed by a description of the diagnosis, assessment and management techniques used to treat it, as well as questions and answers (between 8 and 10) about relevant aspects related to the diagnosis and treatment of the addressed disease. The Q&A section will broaden discussion and increase the title's pedagogical value. The casebook features 40 surgical cases in the following thematic areas: Aortic Disease, Arrhythmias, Cardiac Tumors, Coronary Insufficiency, Congenital Heart Disease, Endovascular Therapies, Heart Failure, Heart Transplantation, Mechanical Circulatory Support, Pericardial Disease, Pulmonary Embolism and Valvular Heart Disease. This book will be prepared by the Brazilian Department for Academic Leagues of Cardiovascular Surgery, within the Brazilian Society of Cardiovascular Surgery (BSCVS). This department is the section within BSCVS that consists of the academic

leagues of cardiovascular surgery from each university throughout the country. In Brazil, medical academic leagues are organizations that gathers students, interns and residents to discuss a certain topic and promote research and teaching-oriented extra-class activities, supervised by a group of professors. Thus trainees will have involvement in writing the chapters and the senior professor supervisors will edit and finalize the work. Basically, each chapter is written by an intern or resident and, ultimately, his/her supervisor. As the books volume editors, doctors Almeida and Jatene will have final responsibility for the cases and overall manuscript.

Rare Tumors of the Thyroid Gland-José Manuel

Cameselle-Teijeiro 2017-09-20
This book documents the most
important clinicopathological
features of rare thyroid
tumours with an emphasis
(and ample documentation) on
their histological and
immunohistochemical

aspects. Whenever necessary,
namely for differential
diagnosis and/or therapy
purposes, molecular data are
also highlighted. In order to
understand the histogenesis
of rare lesions and to be able
to make a differential
diagnosis, the editors use the
WHO book for endocrine
tumours (in preparation) as a
framework for classifying
thyroid tumours. In addition
to characterizing the main
histotypes of thyroid tumours,
this book also provides
detailed information on how
to approach the diagnosis of
tumours according to the
major
morphological/immunohistochemical
characteristics, the
predominant morphology and
whether or not they are
hereditary. This book is a
valuable learning tool for
those involved in the
differential diagnosis of
thyroid lesions.
